

WHAT IS A ROOT CANAL

A modern dental office with a large window, a dental chair, and a computer monitor. The room is bright and clean, with a white ceiling and walls. A large window on the left side provides a view of a city skyline. A dental chair is positioned in the center, and a computer monitor is mounted on the wall. The overall atmosphere is professional and comfortable.

DENTAL PHOBIA?

WHAT IS A ROOT CANAL?

Root canal treatment is designed to remove bacteria from the infected tooth. Unlike other parts of the body, when a tooth is infected, antibiotics will not be enough. A root canal is needed to remove the infected pulp, clean and disinfect the tooth before it is sealed.

SAVING
THE NATURAL
TOOTH WITH
ROOT CANAL
TREATMENT
HAS MANY
ADVANTAGES:

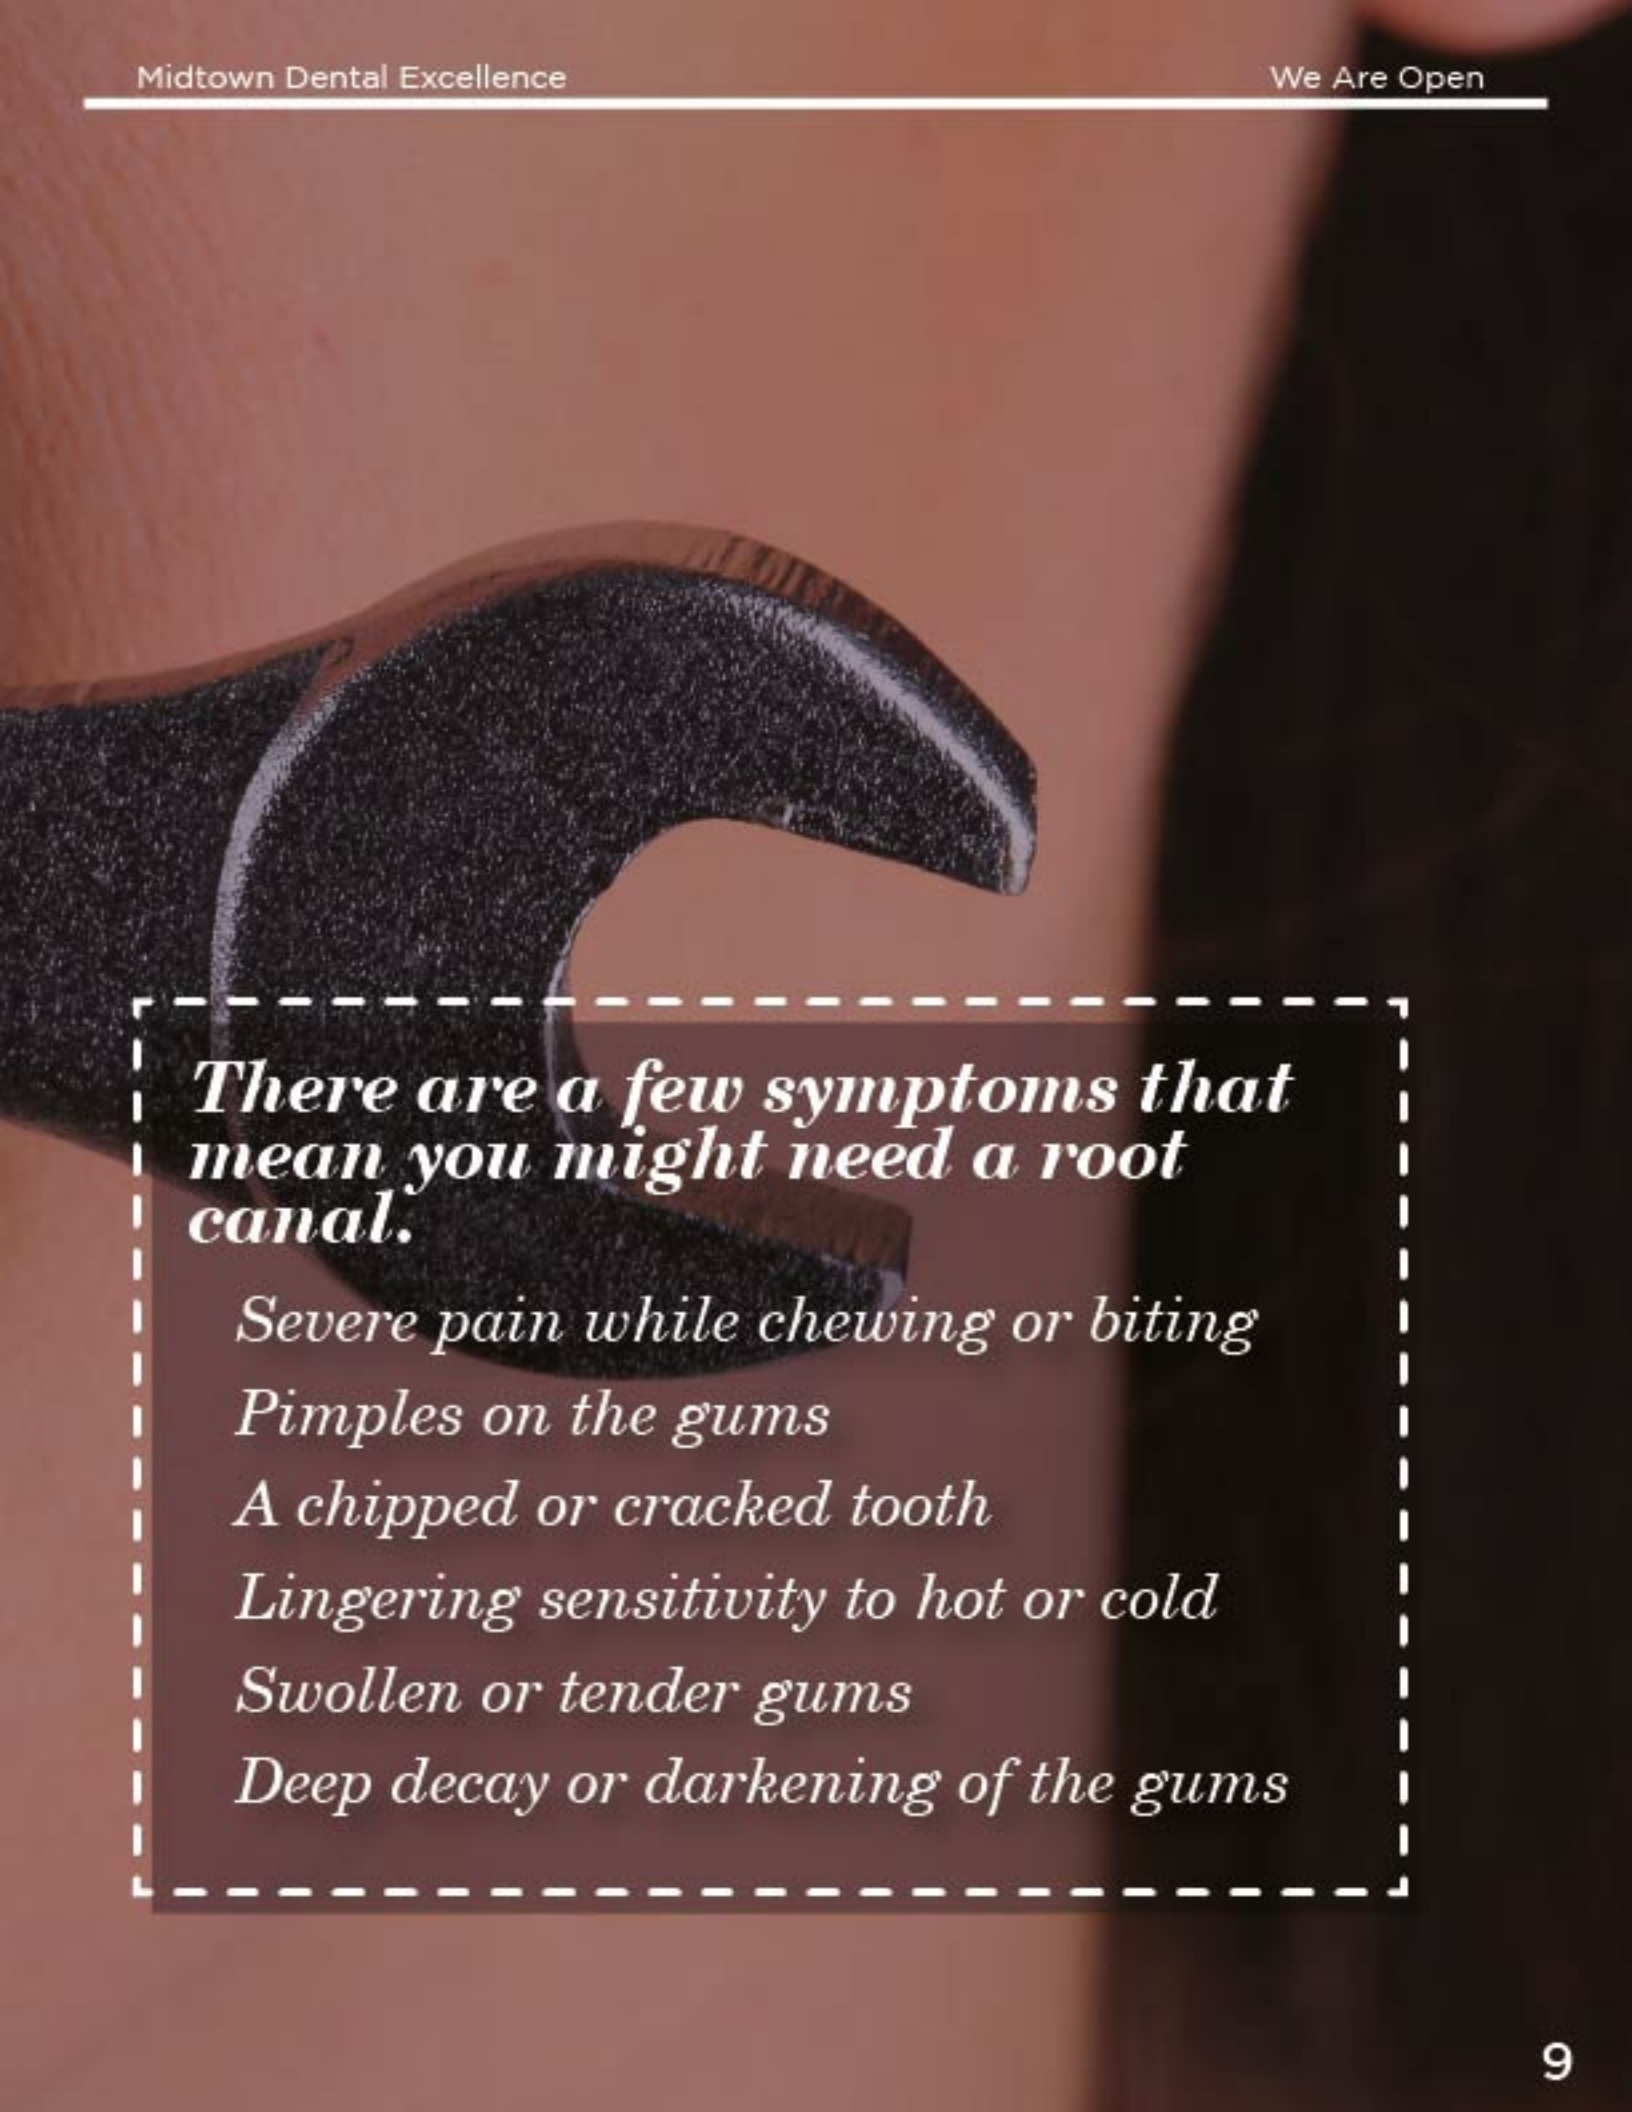

- **Efficient chewing**
- **Normal biting force and sensation**
- **Natural appearance**
- **Protects other teeth from excessive wear or strain**

SPECIAL.

**DO YOU NEED A
ROOT CANAL?**

There are a few symptoms that mean you might need a root canal.

Severe pain while chewing or biting

Pimples on the gums

A chipped or cracked tooth

Lingering sensitivity to hot or cold

Swollen or tender gums

Deep decay or darkening of the gums

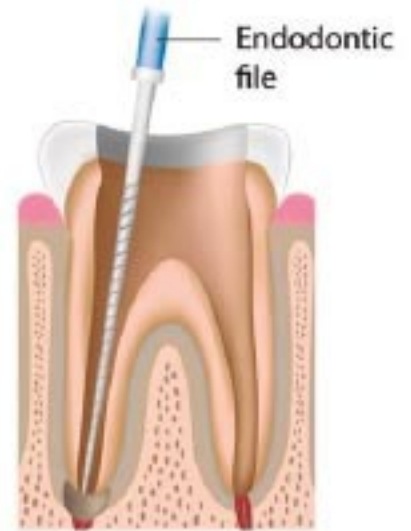

ROOT CANAL TREATMENT

Infected tooth

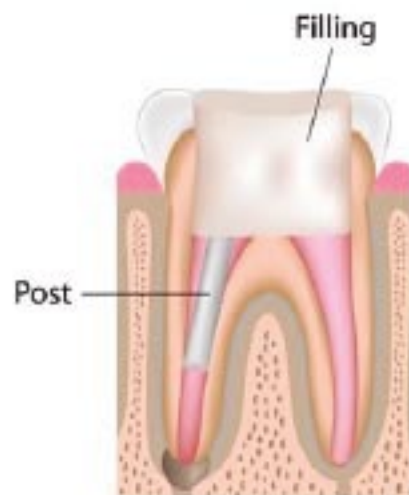

Opening made in tooth

Infected tissue removed; Canals cleaned

Canals filled with a permanent material (gutta - percha)

Opening sealed with filling. In some cases, a post is inserted for extra support

New crown cemented onto rebuilt tooth

DR. FIRAS MARSHEH

A New York endodontist
who places his patients
comfort first.

“I aim to reduce the anxiety and stress that accompany an endodontic treatment experience and provide each patient with care, comfort, and knowledge before treatment. Also, I strive to treat and give each patient the optimal results in a short amount of time.”

CAN'T AFFORD A ROOT CANAL?

Midtown Dental Excellence Offers:
\$0 Down Payment.
Up to 24 Months 0% Interest Free Plans.

The cost varies depending on how complex the problem is and which tooth is affected. Molars are more difficult to treat; the fee is usually more. Most dental insurance policies provide some coverage for endodontic treatment.

Generally, endodontic treatment and restoration of the natural tooth are less expensive than the alternative of having the tooth extracted.

An extracted tooth must be replaced with an implant or bridge to restore chewing function and prevent adjacent teeth from shifting. These procedures tend to cost more than endodontic treatment and appropriate restoration.
